

*Training Course:  
Energy, Carbon and the Environment*

*20 - 24 January 2025  
London (UK)  
Landmark Office Space - Oxford Street*

## Training Course: Energy, Carbon and the Environment

Training Course code: HE7026 From: 20 - 24 January 2025 Venue: London (UK) - Landmark Office Space - Oxford Street  
Training Course Fees: 5775 € Euro

### Introduction

With increasing concerns about climate change, carbon footprint, and energy production, there are a lot of misconceptions and misunderstandings concerning the subject. This course will try to clear up these misunderstandings and misconceptions by going into some depth about the various forms of energy production, their environmental impacts, waste management issues, and the global challenges in these areas that we all have to deal with. As the push is on now to moving towards a low carbon future, organizations have to ensure that their staff is being kept current and informed.

Workshops, DVD videos, and classroom exercises will be used during the seminar to enhance the learning process.

### Course Objectives of Energy, Carbon and the Environment

- Learn about the various types of energy production, their positives and negatives, cost comparisons and which ones are being recommended by the Intergovernmental Panel on Climate Change IPCC
- An in-depth look at Sustainability
- Calculation of Carbon Footprints
- The significance of Climate Change and Why a global perspective with global input is necessary
- Why Waste Management issues and the availability of Water are important components of the equation
- Learn about the concept of Zero Waste and the benefits of an integrated Waste Management System

### Course Methodology of Energy, Carbon and the Environment

The course will encourage delegates' participation and the atmosphere in the classroom will be tailored to asking questions and the delegates will be made to feel welcome in a stress-free atmosphere. The instructor has worked in a nuclear power station and fossil-fuelled generation stations oil, coal, and natural gas will share some technical practical experiences during some of the discussions.

### Organizational Impact of Energy, Carbon and the Environment

- The organization, based on the training received by its employees at the course, will be more aware of sustainability and carbon footprint issues at the plant and be able to advise/recommend solutions when requested. This usually results in improved productivity
- As climate change is now a global issue, and the informed employees will be able to differentiate between misconceptions and factual information on this issue.
- Enhanced reputation of the organization in the community knowing that the company is doing its part concerning reducing its carbon footprint
- Concerning energy production, by knowing the positives and negatives of each form of energy production and their relative costs, the informed employee can make the appropriate recommendations for optimizing the plant's current energy-producing method and also offer some valuable input if a new energy-producing method is planned
- By addressing any real or potential contamination problems, the company is proactive in doing its part in

- minimizing any adverse environmental impacts from its operations
- An improved image of the organization with the Regulatory Authorities

## Personal Impact of Energy, Carbon and the Environment

- Personal satisfaction of the employee knowing that the organization is providing the necessary information required for him/her to stay current on energy, carbon, and environmental issues
- Risk Reduction knowledge which will provide lasting benefits both personally and professionally
- Information acquired during the course will contribute to a safer working environment
- The personal psychological advantage of an employee doing his or her part concerning one of the recommendations of UNEP United Nations Environmental Program - "Think Globally, Act Locally"
- Personal pride in being part of an organization that's committed to protecting the environment and preventing pollution
- Personal pride in having the necessary information to discuss what's known and what's not known about climate change issues

## Course Outlines of Energy, Carbon and the Environment

### DAY 1

A general outline of the course which will include definitions, types of energy and their relationships with the environment

- Brief general introduction- Seminar instructor and attendees
- An overview of the course material that will be covered in the 5 days
- Definitions
- A detailed look at the various forms of energy used for electrical production and their positives and negatives
- A fossil oil, natural gas, and coal
- Canadian Oil Sands and Gulf Coast Countries oil similarities and differences
- Geothermal
- DVD
- Class Exercise

### DAY 2

A brief review of the topics covered in Day 1 and a continuation of the other forms of energy used for Electrical production

- Nuclear
- Hydro Electric
- Biomass
- Combined Cycle
- Wind
- Fuel Cell
- Electrochemical batteries
- Emerging Technologies
- DVD
- Class Exercise

### DAY 3

A brief review of the topics covered in Day 2 and a detailed look at Carbon Footprints for each of the various forms of energy used for producing electricity and their contribution to the organization's KPIs Key Performance Indicators and a discussion on Environmental Risks and Health & Safety Issues ISO 18001

- Carbon Footprints calculations
- KPIs
- Environmental Risks
- ISO 18001
- DVD
- Class Exercise

#### DAY 4

A brief review of the topics covered in Day 3 and current information on GHGs Green House Gases, sustainability & related international environmental treaties and the role that the availability of Water plays in the Energy, Carbon and Environment equation

- Green House Gases
- Sustainability issues
- Related International Environment Treaties
- Availability of Water
- Water banking
- Class Exercise

#### DAY 5

A brief review of the topics covered on Day 4. A detailed look at What's known and not known about climate change. Why most companies are now moving towards an Integrated Waste Management System. Environmental Ethics and moving towards a low carbon or carbon-negative future.

- Climate Change and its significance for the Gulf Coast Countries
- Integrated Waste Management System
- Waste disposal & the concept of Zero Waste
- Environmental Ethics
- Moving towards a low carbon future carbon negative
- Generic recommendations concerning "greening" your company at a reasonable cost
- Complete course review

## Registration form on the Training Course: Energy, Carbon and the Environment

Training Course code: HE7026 From: 20 - 24 January 2025 Venue: London (UK) - Landmark Office Space - Oxford Street Training Course Fees: 5775 € Euro

Complete & Mail or fax to Global Horizon Training Center (GHTC) at the address given below

### Delegate Information

Full Name (Mr / Ms / Dr / Eng): .....  
 Position: .....  
 Telephone / Mobile: .....  
 Personal E-Mail: .....  
 Official E-Mail: .....

### Company Information

Company Name: .....  
 Address: .....  
 City / Country: .....

### Person Responsible for Training and Development

Full Name (Mr / Ms / Dr / Eng): .....  
 Position: .....  
 Telephone / Mobile: .....  
 Personal E-Mail: .....  
 Official E-Mail: .....

### Payment Method

- Please find enclosed a cheque made payable to Global Horizon
- Please invoice me
- Please invoice my company

### Easy Ways To Register

Telephone:  
+201095004484 to  
provisionally reserve your  
place.

Fax your completed  
registration  
form to: +20233379764

E-mail to us :  
info@gh4t.com  
or training@gh4t.com

Complete & return the  
booking form with cheque  
to: Global Horizon  
3 Oudai street, Aldouki,  
Giza, Giza Governorate,  
Egypt.
