Training Course: Project Management for Supply Chain Professionals

Training Course code: PC4006 From: 15 - 19 December 2025 Venue: London (UK) - Landmark Office Space
- Oxford Street Training Course Fees: 5500 € Euro

Introduction

Supply Management is the process of managing relationships, information, and materials flows across organisational boundaries to deliver enhanced customer service and economic value. Supply managers aim towards synchronizing and amalgamating these flows through the implementation of a specific ordering of work activities across time and place, with a beginning, an end, clearly identified inputs and outputs, as well as a structure for action.

Project Management is also a structured process of managing workflow in a specific order across time and place. The close similarities between these two processes provide a firm foundation to expand the supply manager's world view to adopt project management principles and techniques. This course focuses on integrating project management principles into the supply management process. In this course, you will learn how project management concepts could be applied to enhance supply management. You will also gain an understanding of the tools and techniques used to initiate, execute, manage and control a project. Possible initiatives for the improvement of supply management through the application of project management concepts will be emphasised.

Course Objectives of Project Management for Supply Chain

Following completion of this course, delegates will learn how to:

- Organize, plan, launch, track, and close a project
- Create a clear project objective and work breakdown structure
- Master project planning, execution and control skills
- Identify the skills necessary to lead or serve on a project team
- Utilize project management related techniques
- Create an accurate project timeline
- Incorporate uncertainties in project time and cost plans
- Use various project scheduling techniques
- Plan a project balancing the constraints of scope, time, cost and quality
- Complete project cost estimation and financial evaluations
- Build and maintain effective and efficient project procedures and processes
- Identify improvement opportunities to better manage supply chains
- Demonstrate proficiency in developing project plans and making sound decisions

Course Process of Project Management for Supply Chain

The course is a mixture of speaker input, several mini-case studies and facilitated discussions. Participants will gain detailed knowledge of project management concepts and techniques by active participation in the group discussions.

Course Benefits of Project Management for Supply Chain

Delegates attending this course will gain:
