Training Course: Mark VIe PLC Control

Training Course code: EN236536 From: 4 - 8 October 2026 Venue: Istanbul (Turkey) - DoubleTree by Hilton Istanbul
Esentepe Training Course Fees: 6825 € Euro

Introduction

This program introduces participants to the principles and applications of the Mark VIe control system in industrial automation. It focuses on understanding system architecture, operational concepts, and management approaches.

Course Objectives

By the end of this program, participants will be able to:

- Describe the architecture and components of the Mark VIe control system.
- Understand the role of Human-Machine Interface HMI in operations.
- Recognize system monitoring, performance oversight, and alarm concepts.
- Apply conceptual best practices for system reliability and compliance.
- Discuss safety and operational considerations in industrial control systems.

Target Audience

This course is designed for professionals interested in understanding industrial control systems at a conceptual level, including:

- Managers and decision-makers in industrial operations.
- Engineers and technical supervisors seeking strategic understanding.
- Professionals in energy, oil & gas, and process industries with no hands-on role.

Outline

Day 1: Introduction to Mark VIe Control Systems

- Overview of system architecture
- Key components and redundancy concepts
- Applications in industry
- Safety and operational overview

Day 2: System Operation Concepts

- Human-Machine Interface overview
- System status monitoring concepts
- Alarm and event management principles
- Operator role and responsibilities

Day 3: Conceptual Control Logic

- Overview of control logic and configuration approaches
- Parameter and system management concepts
- Conceptual understanding of I/O operations

Day 4: System Oversight and Maintenance Concepts

- System diagnostics overview
- Preventive maintenance principles
- Backup, recovery, and reliability considerations

Day 5: Strategic System Integration and Management

- Integration concepts with other control systems
- Network architecture and communication principles
- Cybersecurity awareness in industrial environments
- System optimization strategies and case discussion.
